

FOR IMMEDIATE RELEASE

The Xtreme Performance Rack/Tower Series (XPRT) Officially Introduced November 1, 2007 – The Value Leader in Power Protection, Xtreme Power Conversion, Inc. (Xtreme Power) today announced that it has introduced a new family of online, multi-form-factor uninterruptible power supplies to its suite of power protection and data center products.

Xtreme Power underwent extensive market research prior to creation of the XPRT Series. Customer input served as the cornerstone to create the four premises of product development:

- 1) Maximum reliability
- 2) Lower cost of ownership
- 3) Enterprise level features
- 4) Unparalleled pricing

The XPRT Series is available in four optimized sizes: 1000va, 1500va, 2000va and 3000va. The offering incorporates true on-line double conversion technology for maximum reliability in a small 2U form factor. Advanced Battery Management (ABM) leverages a temperature compensated three stage charger and works to prolong battery life and lower the “total cost of ownership”. Features such as more standard communications capabilities (USB & RS 232) and four included “5 in 1” brackets allows for multiple installation form factors (19” rackmounting, 23” rackmounting, tower mounting and wallmounting) to be achieved. An enterprise grade LCD provides more precise and accurate local information than antiquated LED displays.

“Our marketing team has done an excellent job identifying customer needs and our product development team has created a product line that allows customers to purchase product features, that solve real world problems, at prices never before achieved with this feature set. There is no question that “Xtreme Value” has been achieved with the XPRT line of uninterruptible power supplies,” states Gene Adams, Xtreme Power’s President.

The XPRT products are available via various distribution channels. Please contact MaxPower Corporation for reseller sales: www.maxpowercorp.com
